SUNTEC SINGAPORE EMBRACES THE POWER OF DYNAMIC DIGITAL SIGNAGE TO RUN ITS OWN IN-HOUSE INFO-CHANNEL

Suntec Singapore, June 2003 - Suntec Singapore International Convention and Exhibition Centre embraces the power of Scala's dynamic digital signage and proudly boasts its very own in-house visual communications channel. Suntec Singapore is at the heart of Asia's most integrated meetings, conventions and exhibitions hub and its latest investment in the technology of digital signage infuses further value to its premier status.

Suntec Singapore's Info-Channel, successfully installed by Click Grafix, a software solutions provider for video and multimedia broadcasting, runs on the technology of Scala's powerful InfoChannel 3 Suite and is played back on 10 state-of-the-art plasma screens mounted strategically in the main lobby. Scala is also used to operate Asia's biggest LED screen on the exterior façade of Suntec Singapore, which runs ads and promotional content from various advertisers daily from 7AM to 12AM all year round.

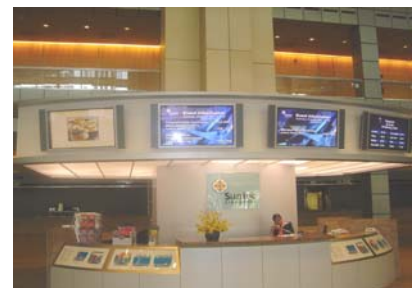

The Info-Channel transforms Suntec Singapore's communications into more dynamic visuals on the screens and a variety of information ranging from advertisements, event schedules, promotions, video clips and facilities directory are effectively delivered to visitors, creating awareness and consistently keeping visitors updated with current events.

In response to the question on why the Scala solution was favoured, Eric Chew, Manager, Information Technology said, "We've been using the older version of Scala for the last five years and it has impressed us with its stability and reliability. Its downtime is also minimal. There are great improvements on the newer version of Scala features, such as TV tuner, Flash, 3D effect, job transaction log, and it now even supports Chinese characters. These are the features that we like about the solution".

The content development for Suntec Singapore's Info-Channel is administered by its own team of multimedia content developers while Click Grafix provides technical assistance and support that relates to Scala programming. Digital advertisements are supplied by the various advertisers and is uploaded into the channel by Suntec Singapore's in-house design team. The frequency of content updates for the Info-Channel occurs on an average of between 3 to 5 new ads on a weekly basis.

The Info-Channel has effectively gained much favour with Suntec Singapore's visitors, patrons and vendors who receptively see it as a refreshing approach to visual communications and keeping in touch with events. Advertisers in particular favour the plasma screens located at both ends above the information counter which simultaneously run ads with the e-board as these provide additional mileage and exposure for their branding exercise at no additional cost when the e-board is booked. Another six plasma screens serve as a mode of in-house communication featuring daily events information, world time and F&B outlets as well as promotions. This additionally serves as a point of information for patrons as well.

Click Grafix's successful installation and implementation of Suntec Singapore's Info-Channel the Scala InfoChannel solution adds another significant milestone to Scala's testimonies as a leader in dynamic digital signage.

About Scala Inc.

Founded in 1987, Scala pioneered the cable TV industry with software and services to allow users to create localized channels inexpensively. Today, Scala has grown to lead the corporate communications, retail dynamic signage, and interactive kiosk industries as well. With an unrivaled software suite to handle authoring, networking, monitoring, and logged playback, Scala has been the choice of tens of thousands of customers worldwide. Built on reliable and flexible network architecture, Scala software can support nearly any existing infrastructure from dial-up to LAN to Wi-Fi to satellite and terrestrial-based multicast networks. Scala's powerful and efficient store-and-forward design allows the control of unique content on a single cable head end or thousands of remote displays or kiosks from a single desktop PC without the constraints of streaming video.
